

Service Planning (GDGP) - a reflective session

Introduction

The value of Goal Directed Care Planning (GDGP) as part of person centred practice is well documented and we know that EMR HACC agencies and their staff are committed to working in person centred ways. However, we also know that translating the client's priorities, strengths and abilities into a meaningful GDGP can sometimes be challenging – as no two care plans will be the same. Being able to 'step back' and review completed care plans is a useful way to reflect on your agency's progress towards embedding effective GDGP and forms a key element of staff professional development.

The Workshop

This workshop aims to reinforce GDGP skills for staff actively involved in care planning and provides an opportunity for staff to reflect (and check in) on their progress towards documenting effective and meaningful care plans. Participants will be guided to use the 'Completed Audit Tool' to evaluate a sample of completed care plans followed by a discussion about the strengths and opportunities for improvement to the plans, and how they are developed.

The workshop will provide lots of opportunity for questions, peer discussion, and shared problem solving within the context of best practice and continued quality improvement.

The workshop will include a brief overview of the key elements of good care planning and will be tailored to the needs of each participating agency.

Target audience

- Target audience includes Assessment staff, Program Coordinators, Team Leaders, and Activity Workers from Planned Activity Groups and Social Support activities (including transport providers and volunteer coordination)
- It is expected that participants are actively involved in the care planning process (assessment, goal setting and care planning)
- This workshop is not recommended for staff new to care planning.
